The German Democratic Republic (East Germany) started its own standardized education system in the 1960s. The East German equivalent of both primary and secondary schools was the Polytechnic Secondary School (Polytechnische Oberschule), which all students attended for 10 years, from the ages of 6 to 16. At the end of the 10th year, an exit examination was set.

1. Introduction. Humans and wildlife are exposed to an intractably large number of different combinations of chemicals via food, water, air, consumer products, materials and goods. The possible combinations of mixtures are increased by use of inter alia pharmaceuticals, drugs, tobacco and occupational exposures. Taken together, this raises significant concerns about the impacts on public and ...

In chemistry, Molecular orbital (MO) theory is a method for describing
the electronic structure of molecules using quantum mechanics. Electrons are not assigned to individual bonds between atoms, but are treated as moving under the influence of the nuclei in the whole molecule. The spatial and energetic properties of electrons are described by quantum mechanics as molecular orbitals surround ...
