Community-Acquired Pneumonia (CAP): Practice Essentials ...
In November 2010, the American Academy of Pediatrics endorsed the following publication: Bradley JS, Byington CL, Shah SS, et al. The management of community-acquired pneumonia (CAP) in infants and children older than 3 months of age: clinical practice guidelines by the Pediatric Infectious Diseases Society (PIDS) and the Infectious Diseases Society of America (IDSA).

Management of Community-Acquired Pneumonia (CAP) in ...
Most outpatients with community acquired pneumonia are treated with azithromycin (or another macrolide antibiotic) as this drug gives a simple treatment regimen (single drug, simple dosing, short course). However, the efficacy of this regimen has been questioned in recent years due to increasing macrolide resistance.

The SMART-COP Score for Pneumonia Severity predicts need for intensive respiratory or vasopressor support in community-acquired pneumonia.

**SMART-COP Score for Pneumonia Severity - MDCalc**
Community-acquired pneumonia (CAP) remains the leading cause of infectious disease death in developed countries. Described by Sir William Osler as “captain of the men of death,” it dates back to antiquity. However, we are only beginning to understand the best ways to treat it.

**Evidence-based treatment for severe community-acquired**
Hospital-acquired pneumonia (HAP) or nosocomial pneumonia refers to any pneumonia contracted by a patient in a hospital at least 48-72 hours after being admitted. It is thus distinguished from community-acquired pneumonia. It is usually caused by a bacterial infection, rather than a virus. HAP is the second most common nosocomial infection (after urinary tract infections) and accounts for 15 ...
