Oracle 11g programming language support New Features. PHP - Improved PHP driver for Oracle. Compilers - Improved native Java & PL/SQL compilers. Oracle 11g XML Enhancements - Oracle 11g will also support Content Repository API for Java Technology (JSR 170). Oracle 11g has XML "duality", meaning that you can also embed XML directives inside PL/SQL and embed PL/SQL inside XML code.

Oracle 11g new Features - Oracle Consulting, Oracle ...
In this case, I have created a plan directive that is a part of an overall plan called MAIN_PLAN. This particular plan directive is designed to limit the impact of online ad-hoc users (or perhaps applications that are throwing out a great deal of dynamic SQL that’s hard to tune) if they issue queries that take a long time (in this example, 3 seconds).

There is a huge difference between the below two: splitting a single delimited string; splitting delimited strings for multiple rows in a table. If you do not restrict the rows, then the CONNECT BY clause would produce multiple rows and will not give the desired output. For single delimited string, look at Split single comma delimited string into rows; For splitting delimited strings in a ...

sql - Splitting string into multiple rows in Oracle ...
The schema of a database system is its structure described in a formal language supported by the database management system (DBMS). In a relational database, the schema defines the tables, the fields, relationships, views, indexes, packages, procedures, functions, queues, triggers, types, sequences, materialized views, synonyms, database links, directories, Java, XML schemas, and other elements.

PL/SQL program unit. The main feature of SQL (non-procedural) is also a drawback of SQL: one cannot use control statements (decision-making or iterative control) if only SQL is to be used. PL/SQL is basically a procedural language, which provides the functionality of decision making, iteration and many more features like other procedural
programming languages.
