Ethylene (IUPAC name: ethene) is a hydrocarbon which has the formula C2 H 4 or H 2 C=CH 2. It is a colorless flammable gas with a faint "sweet and musky" odour when pure. It is the simplest alkene (a hydrocarbon with carbon-carbon double bonds). Ethylene is widely used in the chemical industry, and its worldwide production (over 150
million tonnes in 2016) exceeds that of any other organic ...

A study of 30 children and adults diagnosed with ADD found Flavay® worked just as well as the commonly prescribed stimulant medications, including Ritalin. The subjects were given a battery of computerized and behavior tests to judge their attention, concentration, and other important ADD factors. Tests were conducted three times in three ways: off their usual stimulant meds, back on the meds ...

German researchers have found that one species of thyme, Thymus serpyllum, may have an adverse effect on the thyroid. The research team, who published their findings in the June 1982 issue of "Planta Medica," reported that thyme, as well as other members of the mint family, impacted levels of a thyroid-stimulating hormone secreted by the pituitary gland in rats.

Introduction. Many cancer patients live with the knowledge that their disease is both progressive and incurable. For a significant minority of these people this reality may be present in the form of a malodorous, exuding, necrotic skin lesion, which can be a constant physical reminder of disease progression. These lesions are commonly known as 'fungating wounds', the term 'fungating ...

The estimated glomerular filtration rate (eGFR) is used to screen for and detect early kidney damage, to help diagnose chronic kidney disease (CKD), and to monitor kidney status. It is a calculation based on the results of a blood creatinine test along with other variables such as age, sex, and race (e.g., African-American, non-African American), depending on the equation used.
